Dishes on your PLA 3.0 plate

PLA 3.0 Academy | Learning and growing together

Academy
PLA 3.0

Bringing recipes to life

While templates provide the recipe, documents are where everything comes together—the dish is prepared and plated, ready to be served.

Each document in PLA 3.0 is a tangible output created from a template, customized with specific data and context.

Customizable outcomes

Just as a chef might add a touch of spice or tailor a dish to a diner's preference, documents in PLA 3.0 allow for flexibility within a structured recipe.

Each document:

- Captures unique data for the specific use case.

- Adapts to the context while retaining consistency.

- Provides a complete, ready-to-use record of your bioassay processes.

Teamwork in action

Creating a memorable dish is often a team effort—cooks, servers, and kitchen staff working in harmony.

Similarly, PLA 3.0 documents support seamless collaboration.

Role-based permissions and version tracking ensure that everyone contributes to a high-quality result without confusion or conflict.
